MANAGEMENTOF NARROW PUPIL IN PHACO

BY DR. AHMED BAYOUM **CONSULTANT OF OPHTHALMOLOGY ROYAL EYE CENTER-SOHAG**

Introduction

rewarding cataract surgery.

the best surgeon

faces at some time

•A well dilated pupil is the gateway to smooth, easy and

Sometimes the door looks narrow and uninviting even for

• A miotic pupil is a common problem that every surgeon

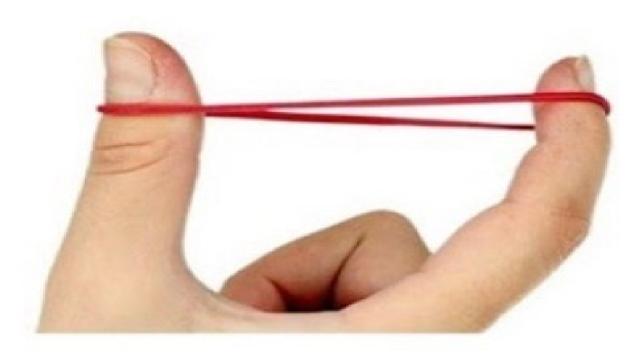

Definition

Small or narrow pupil means poorly or undilated pupil with diameter < 6mm during phaco surgery.

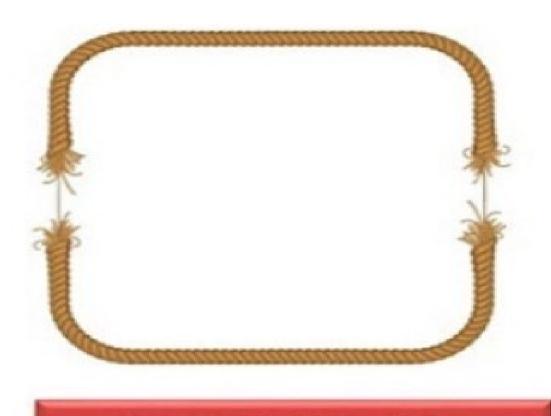

Types

Elastic small pupil

Stretchable

Rigid small pupil

Not Stretchable

Common causes

- Pseudoexfoliation Syndrome
- Diabetes
- Long term use of miotics
- Old age, Mature Cataract & High Hypermetropia
- •
- Previous trauma \bullet
- •
- progressive intraoperative miosis)

Chronic anterior Uveitis : with posterior synechiae

IFIS: with use of alpha 1 antagosit, and characterized by triad (iris billowing, iris prolapse towards main and side port incisions &

Challenges

- All steps become difficult due to difficulty in visualization
- Smaller rhexis
- Hydrodissection wave not clearly visible

- Incomplete cortex aspiration
- Displaced IOL

Decreased red reflex with difficulty in judging the depth during phace increasing chance of PCR Difficulty in maneuvering leading to iris damage, sphincter tear, iridodialysis, bleeding

Prolonged surgical time complication as endothelial damage, AC inflammation, 2ry glaucoma,

Management strategies

Pre-operative :

possible mydriatics & good anasthesia

Intra-operative:

- Intracameral epinephrine (1:10000)
- Viscomydriasis using OVD
- Pupil stretching
- Multiple microsphincterotmies
- Iris hooks
- Pupil expansion rings as Malyugin ring

- careful examination with good history for detecting underlying aetiology & observe maximum

Take home message

Safe surgery is always the priority.

Outcome depends on type of the small pupil, surgeon experience and density of cataract. Don't hesitate to use devices when needed.
